

Market Power ABM

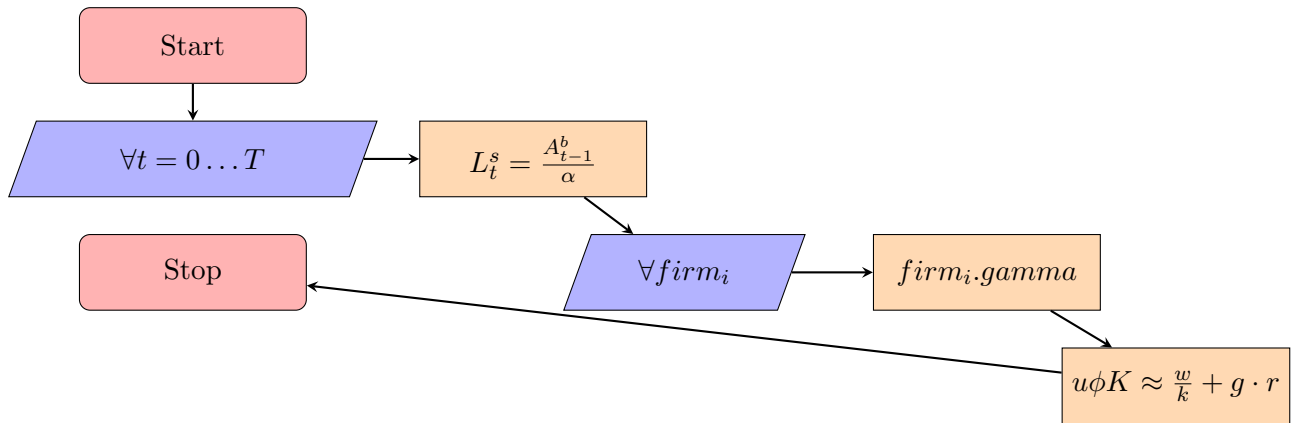

Héctor Castillo

December 23, 2023

1 Introduction

With the intention of obtaining a framework that allows to execute ABM in Python, we present `market_power`, with the next elements:

- Auxiliary files:
 - `requirements.txt`: list of the necessary python packages
 - `util/statistics.py`: class for managing the output
 - `util/stats_array.py`: it contains the code to plot with pyplot, bokeh, grace and gretl.
 - `util/log.py`: class for managing the logging
 - `output/*`: the files generated (plots mainly)
 - `test/*`: unit tests
